Information Technology Definitions

- **Mainframes** are computers used mainly by large organizations for critical bulk processing of information (financial transaction processing, statistics, etc.)

- **Computers** (including "mini," "micro," and "workstation") are most often taken to mean a computer with a microprocessor as its central processing unit (CPU). Another general characteristic of these computers is that they occupy small physical spaces. Computers are also personal computers, workstations, and laptops.

- **Imaging** is the processing, storage, compression, and printing of data. Imaging can refer to pictures or documents.

- **Peripherals** are devices connected to a host computer, but not part of a computer's architecture. They are typically dependent upon the host computer. Examples include keyboards, mice, printers, scanners, microphones, speakers, webcams and external storage devices.
